ACKNOWLEDGEMENT

It is my proud privilege to release the feelings of my gratitude to several persons who helped me directly or indirectly to conduct this RAWE work. I express my heartfelt and deep sense of gratitude to my teachers and my coordinator **Dr. Kailash Sati, Mr. Khub Ram (Farm Manager), Mr. Vijay Kumar and Mr. Yograj** (Co-in charge) RAWE for their guidance and inspiration in completing this work. I would also like to thank **Dr. D.R.Thakur** (Dean School of agriculture), **Dr. A.K. Gautam** (H.O.D. School of Agriculture) and all the professors for giving me support in each possible way throughout my course.

Lastly, I would like to express my special thanks to my family who have been a great inspiration in my whole life and give me endless moral support and lots of care throughout my life.

RURAL AGRICULTURAL WORK EXPERIENCE

INTRODUCTION

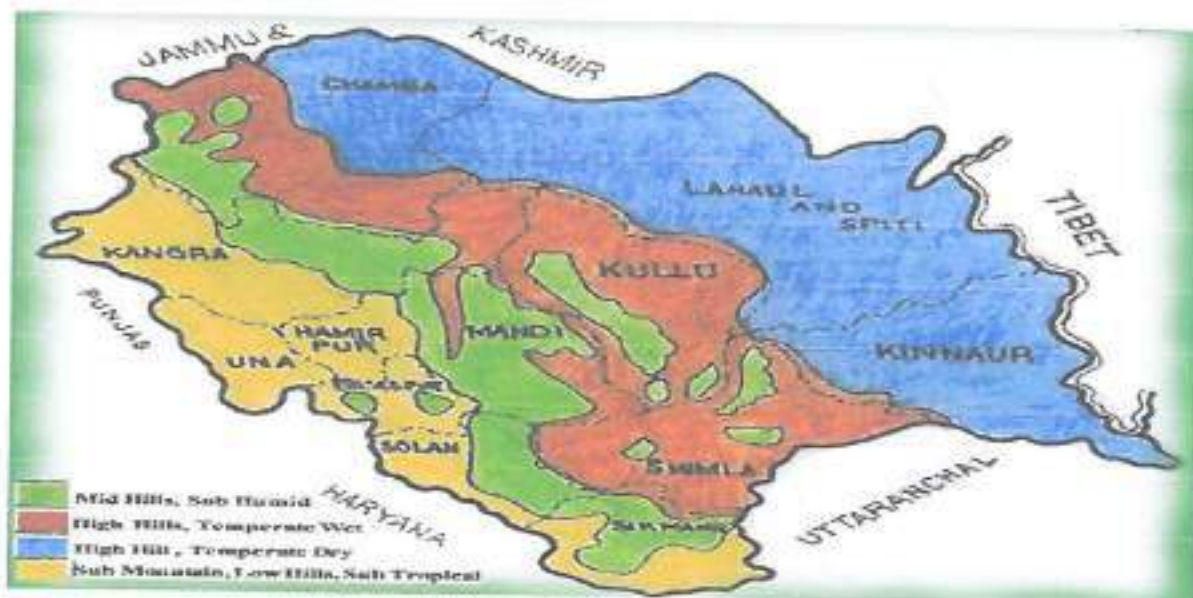

The RAWE (Rural Agricultural Work Experience) is conducted in 7th sem 4th year. The main aim of the program is to acquaint the student with the villagers and the farming situation. So that we have practical - knowledge about agriculture. All the student are divided into 3 different groups. These group are assigned to carry out different activities under the proper guidance of Dr. Kailash Sati (RAWE In charge), Mr. Khub Ram (Farm manager), Mr. Yograj and Mr. Vijay Kumar (Co-in charge of RAWE)

Objective of RAWE:

- To make student understand the rural community life and the prevailing situation.
- To familiarize with the rural socio-economic conditions.
- To provide an opportunity to have practical training in crop production.
- To improve communication skills among the students using extension teaching methods in transfer of technology.
- To explore the high-tech agricultural technology and the factors affecting the adoption of modern methods of agriculture.
- Preparing agricultural graduates for better career in agriculture.
- Preparing Agricultural graduate oriented education to face the challenges by acquiring knowledge and skill though hands on experience.

GEOGRAPHIC DESCRIPTION OF HIMACHAL PRADESH

The state of Himachal Pradesh is spread over an area 55,637 km² and is bordered by Jammu and Kashmir on the north, Punjab on the southwest, Haryana on the south, Uttarakhand on the southeast and Tibet on the east. Himachal is a mountainous region, rich in its natural resources. Himachal Pradesh also known as apple state of India for large scale production of fruits. Himachal is well known for its rich flora. Forests cover about 38% of the state's area. It has a variety of wildlife too.

Agro- Climatically zone of Himanchal Pradesh divided into 4 zones

Agro-climatic zones	Areas	Major Crops
1 Shiwalik Hill Zones (Sub Tropical Mountain and Low Hills)	Chamba, Kangra, Hamirpur, Solan, Sirmour and Bilaspur districts	Wheat, maize, paddy, black gram, sugarcane, mustard, potato, vegetable, pulses, barley.
2 Mid Hill Zones (Sub-Humid Mid-Hills)	Chamba, Kangra, Mandi, Solan, Shimla, Sirmour, distt.	Wheat, maize, paddy, black gram, barley, beans, pulses, forages.
3 High Hill Zone (Wet Temperature, High Hill)	Chamba, Kangra, Mandi, Shimla, Sirmour and Kullu distt.	Wheat barley lesser millets, maize, rice, potato.
4 Cold Dry Zone(Dry Temperate High Hills)	Chamba, Kinnaur, entire Lahaul spiti and northern parts of Kullu distt.	Wheat, barley, rajmash .

MANDI District Map

Mandi is almost at the geographical centre of Himachal, lying along the left bank of the river Beas in the foothills of Shivalik ranges. The town has an altitude of 760 metres (2,495 ft) from the sea level. Mandi features a subtropical highland climate under the koppen climate classification. The climate of mandi is composite having hot summers and cold winters. Mandi generally experiences rainfalls during end of summer season. Mandi city falls into lower most climatic zone of the Himalayas. Soil type of mandi is non-Brown Calcic. The fruit tree cover in Mandi is about 15 percent of the total area under fruit tree cover in Himachal Pradesh. Mandi raw silk has acquired wide fame and the rock salt mines at Drang and Guma are special features of the district economy. With abundant deposit of rock salt and limestone, possibilities are being investigated for the existence of magnasite coal and china clay.

ORIENTATION PROGRAMME

Final year BSc agriculture students of the Abhilashi university (AU) participated in an orientation programme on 'rural agricultural work experience (RAWE)', organized by the AU agriculture department. During the programme, Dean of agriculture department offered suggestions to the students on farming systems, and said that the students have to work in different villages and agro-industries. Other staff also delivered their presentation on respective topics. This program lasted for a week.

1 Topic: Brief introduction about RAWE component

Faculty: Dr. D.R. Thakur

Dr. D.R. thakur (Dean of agriculture) addressed our class and gave brief description about RAWE program. He explain us about the main purpose of RAWE program and Agro industrial attachment. He gave us some idea about how to gain knowledge from the farmer, how to interact with farmer and how practical knowledge help us. Dean sir lecture was very helpful for us.

Field Visit

Faculty: Dr. Kailash Sati

We visit the field around the Abhilashi Campus, we identified some crops and discussed with sir. We visited the field of - Soybean (*Glycine max*), Black gram (*Vigna mungo*), Maize (*Zea mays*).

2 Topic: Watershed Management Techniques for Hill Agriculture

Faculty: Er. Shatruhan Jaiswal

Water is a basis of Agriculture and agriculture basis of life. Nature has two eyes i.e; environment and biodiversity. Five elements (panch bhootas) water, air, soil, atmosphere, fire. Global water scenario about 71% of water in Earth crust, 29% land, Water truth-wherever water is there development is certain. Rain water harvesting in hilly areas (traditional methods) kuhl (running water storage), zabo, eri, Swale, sbamboo drip irrigation.

3 Topic: Soil Health and its Indicators

Faculty: Dr. Ravinder

Soil health refers to the ability of the soil to achieve its full potential and be productive under the intended land use. **Soil Physical Properties:** Sand, Silt, Clay

The concept of soil quality or health imply how well soil performs its multiple functions: To serve as a medium for plant growth ↑ To regulate flow of water in the environment ↑ To act as an environmental filter ↑ To maintain human and animal health.

4 Topic: Hybrid seed production

Faculty: Dr. Ritika Singh

Hybrid seed production is predominant in modern agriculture. Hybrids are chosen to improve the characteristics of the resulting plants, such as better yield, greater uniformity, improved color, disease resistance. Mam also told us about some important question related breeding Topics assigned to Dr. Ritika Singh was "Hybrid Seed Production". Along with topic presentation she also taught us some important multiple choice question related to the subject. Hybrids are produced by crossing two genetically dissimilar parents. Cytoplasmic – genetic male sterility, Cytoplasmic male sterility, Genetic male sterility, Self incompatibility and last is manual emasculation or pollination. Hybrids are produced to improve the characteristics of resulting plant like high yielding, disease resistance, improved colour and uniformity.

5 Topic: Organic Farming

Faculty : Dr. Priyanka

Organic agriculture is best known as a method of agriculture where no synthetic fertilizers and pesticides are used. This topic includes need of Organic Farming, Principal, Status of Organic Farming in India. Green Revolution was started during 1960 during this time high yielding variety of rice and wheat were introduced to reduce the poverty and hunger. Total production increased 2304 million after green revolution which was 50 million tones before this revolution. This change happened as the result of introduction of HYV, chemical fertilizers and hybrids. Organic farming relies on ecological processes, biodiversity and cyclic adopted to local conditions rather than use of inputs with adverse effect.

Need of organic Farming generally we all are aware that how much harmful synthesis fertilizers for soil, animal as well as human health so there is need to replace the synthesis adopt organic farming is only alternative that will also sustain the agriculture as its function and its harmony with the nature

Status of organic farming in India India ranks first in term of total organic product and 8th in the term of world organic agricultural land. India producer around 3.49 MT of organic product. Madhya Pradesh has the largest area under organic certification and Sikkim is fully organic state.

Certification agency in India

- Indian organic Certificate Agency (INDOCERT)
- Agricultural And Processed Food Products Export Development Authority (APEDA)
- Indian Organic

6 Topic: Seed production and technology

Faculty: Seed is a fertilized ovule consisting living tissue of embryo closed nourishing tissue endosperm and protective covering is seed coat. "Seed technology comprises techniques of seed production, seed processing, seed storage, seed testing and certification, seed marketing and distribution and the related research on these aspects". The Protection of Plant Variety and Farmers Right Act, 2001 (PPVFR Act) is an Act of the Parliament of India that was enacted to provide for the establishment of an effective system for protection of plant varieties, the rights of farmers and plant breeders, and to encourage the development and cultivation of new varieties of plants.

7 Topic: Agriculture waste management

Faculty: Mr. Yograj

Agricultural waste:

Agricultural waste is composed of organic wastes (animal excreta in the form of slurries and farmyard manures, spent mushroom compost, soiled water and silage effluent).

Include :- Natural waste ,Animal waste, Plant waste Field Wastes, Weeds Straws , Animal Wastes , Animal Dung ,Dead Bodies Agro-Industrial Wastes

MANAGEMENT PROCESSES • Source • Generation • Collection • Transportation • Treatment processes • Disposal

8 Topic: Entrepreneurship and skill development

Faculty: Ms. Chanchal

Entrepreneurship is the art of starting a business, basically a startup company offering creative product, process or service. We can say that it is an activity full of creativity. Agricultural Entrepreneur: The entrepreneurs who undertake agricultural pursuits are called agricultural entrepreneurs. They cover a wide spectrum of agricultural activities like cultivation, marketing of agricultural produce, irrigation, mechanization, and technology.

9 Topic: Weed Management

Faculty: Mr. Vijay Kumar

A weed is a plant growing where it is not wanted it is a unwanted plant. On average 30.33% of crop produce is damaged by weeds.

Prevention of weed

1 Eradication

2 control

10 Topic: Plant growth Regulators

Faculty: Mrs. Shivani Kaundal

Plants require light, water, oxygen, minerals and other nutrients for their growth and development. Apart from these external requirements, plants also depend on certain organic compounds to signal, regulate and control the growth of plants. These are collectively called Plant Growth Regulators or Plant Growth Hormones.

Five major classes Absciscic acid, auxin, cytokinins, ethylene and gibberellins.

Auxin

- Promotion of apical
- Fruit set and growth.

- Formation of adventitious roots.

Gibberellins

Gibberellins stimulate cell division and elongation, break seed dormancy, and speed germination. The seeds of some species are difficult to germinate; you can soak them in a GA solution to get them started.

Cytokinin

Unlike other hormones, cytokinin are found in both plants and animals. They stimulate cell division and often are included in the sterile media used for growing plants from tissue culture.

Ethylene

Ethylene is unique in that it is found only in the gaseous form. It induces ripening, causes leaves to drop. Plants often increase ethylene production in response to stress, and ethylene often is found in high concentrations within cells at the end of a plant's life.

Absciscic acid

Absciscic acid (ABA) is a general plant-growth inhibitor. It induces dormancy and prevents seeds from germinating.

11 Topic: Commercial beekeeping

Faculty: Ms. Bharti

BEE SPECIES

1. *Apis dorsata*: The rock bee Apidae.
2. *Apis cerana indica*: The Indian hive bee Apidae.
3. *Apis florea*: The little bee Apidae.
4. *Apis mellifera*: The European or Italian bee Apidae.

Apiary Management

- Hive inspection
- Honey extraction
- Swarm management
- Seasonal management
- Bee Pasturage/Bee Forage

12 Topic: Current status of Agriculture in India

Faculty: Dr. Nitin

Agriculture is the primary source of livelihood for about 58% of India's population. Gross value added by agriculture, forestry and fishing was estimated at Rs.19.48 lakh crore. India is among 15 leading exporters of agricultural product in the world. India is the world's 2nd largest producers of rice, wheat, sugarcane, cotton, groundnut and fruit and vegetables. Dr. Nitin gave presentation on "Current status of agriculture in India". Agriculture in India is source of livelihood for around 58% of population. Shares of the Agriculture in GDP has reached at 19.9% for the first time after 17 years which was sole bright spot in GDP performance of the year 2020 – 2021. In 2019 – 20, India's agricultural export value was around Rs. 252 thousand crore. Major exporting destination were : USA, Iran Nepal, Saudi Arabia and Bangladesh. Top agricultural and related exported products were marine products, basmati rice, buffalo meat, spices, cotton raw, tea and sugar. According to the data of 2019 – 20, food grain production is around 291.95 million tonnes and as per the estimation of ICAR it will reach around 345 million tonnes by 2030. ICAR distributed India among 15 different agro climatic zones with diverse climates, having different types soil which have capacity to grow different types crop varieties. India rank 1st in the production of milk, Spices, Tea, Cashew, Jute and pulses.

Unit attachment in Abhilashi University

Activities performed during unit attachment program:

Sowing of Pea

Botanical Name - Pisum sativum

Synonym - Matar, Pea

Origin - Mediterranean Region of Southern Europe & Western Asia

Chromosome no. - 14

Variety - Goldie

Seed Rate- 8-10Kg /Bigha

Sowing Depth- 2-3cm

Spacing:

Plant to Plant-3-5cm

Row to Row-30cm

Implements -Spade, Hand hoe, Rack, Wheel hoe.

Field Preparation Firstly we prepared the field for sowing of Pea. The soil was quite hard and had numerous soil clods so we ploughed it for the purpose of proper aeration, removal excess moisture, soil solarisation, destruction of weeds etc excess moisture, soil solarisation etc.

Preparation of Seed bed

We prepared seed beds for sowing of pea.

Application of Fertilizer

Decomposed FYM was added in field. Apply mixture of MOP, SSP and Urea in basal.

Sowing of seed

We used Goldy varieties of pea. Seed is already treated with Captan. Plant to plant distance = 3cm, Row to Row = 30 cm

Pesticides application:

Herbicides = Pendimethalin @2ml/liter

Insecticides = Chlorpyrifos @ 2ml/liter

Pesticides application was done in pea field by using electrical sprayer.

After 7-14 DAS the plants start germinate

Inter- cultural operation:

Weeding: Weeding should be done after 15 DAS.

French bean

Botanical name- *Phaseolus vulgaris*

Family- Fabaceae.

Origin- Central and South America.

Chromosome number- $2n=22$

Variety- Ankur

Stacking Pole type variety was grown in Polyhouse. Stacking was done in French bean for proper growth and avoid damage. Pole type varieties has very long growth so staking is necessary in it.

Data Collection We also collect the data for study purpose. We measured the height of plant, no. of flower cluster, no. of pods, no. of leaves.

Fertigation: Fertigation in whole polyhouse chemical used for fertigation is UTHANE M-45(Fungicide).

Harvesting of French bean

Weeding: Weeding is done inside the polyhouse in the field of radish, brinjal French beans.

Chemical treatment in polyhouse

Insecticide spray was done in polyhouse. 30 gram 'Rusdol' was mixed in 15 lit of wate. Then it was poured in knapsack sprayer and sprayed inside the entire polyhouse.

Brinjal /Eggplant Management:

Botanical Name: Solanum melongena L.

Chromosome No.: $2n = 2x = 24$

Family: Solanaceae

Centre of Origin: Asia

Another Name: baingan, Eggplant, Aubergine, Guinea Squash.

Type of pollination: Self pollinated

Brinjal is grown for its edible fruits. Depending on the length of the style flower of brinjal is classified as:

Long – styled with large ovary

Medium – styled with medium ovary

Pseudo short styled with rudimentary ovary

True short – styled with very rudimentary ovary

On the basis of these flower types one can determine the amount of fruiting going to be happened. Brinjal was already sown in the polyhouse in two long and broad seed beds. So, we performed intercultural operation essential for the growth of the crop.

Harvesting of different crop inside polyhouse.

We did Harvesting of Radish, Brinjal, and Coriander inside the polyhouse.

Soil treatment inside polyhouse

We treated the soil inside the polyhouse with insecticide/Fungicides namely copper oxychloride and chlorpyrifos. We spread the Chemical by mixing it with soil and spread uniformly.

Plant Clinic

In Plant clinic we Collect the different disease sample and identify them using microscope. The main aim of setting up such clinics is to diagnose pests and diseases in any crop and render accurate knowledge to the farming community. We made the slide of Powdery mildew of carrot, false smut of rice. We used the stain lactophenol blue and also visualized it using water.

Stain used:

Stain lactophenol blue

Procedure-

- Firstly, gently clean the slides.
- Dusting the disease powder into the slide with the help of brush.
- Putting a drop of lactophenol into the slide.
- Put the cover slip on it make sure it don't make air bubble in slide.
- Placed the slide under the microscope.

Powdery mildew of carrot

Causal organism *Erysiphe heracleid*

Symptom: Appearance of white powdery mass on both sides of the leaf and leaf petioles. Dry weather and high humidity boost the disease development.

Management: Disease can be controlled using resistance varieties, avoiding water stress conditions and balanced use of nitrogenous fertilizers. Dusting of Sulphur is most effective against powdery mildew.

False smut of Rice

Causal organism *Ustilaginoidea virens*

Symptoms: Transformation of rice grains into yellow powdery mass, infected grains have green smut balls. Fungus usually appear due to presence of rainfall, high nitrogen content in the soil and appear during flowering stage of the crop.

Management: Disease can be managed using disease free seeds, seed treatment with carbendazim. At boot leaf and milky stage application of Copper oxychloride or Propiconazole will prevent the disease.

VILLAGE ATTACHMENT WITH FARMER

The students gained practical experience in farmers' field situations. We created awareness among farmers about recent innovations in agriculture and allied sciences. Through village attachment, the students got the opportunity to understand the rural setting in relation to agriculture and got familiarized with the socio-economic conditions of the farmers their problems and constraints.

FARMER DETAIL

Name = Jai Prakash

Address = Village-Kotli, Post Office-Gunchar
Tehsil Baijnath, District-Kangra

Phone no. = +919418725692

Family member = 4

My farmer grows crops like Cabbage, Cauliflower, Pea, Potato, Pak choi (Chinese cabbage), Brinjal, coriander, capsicum, Broccoli etc. There are 4 members in farmer family. Farmer and his wife work in their field. They don't have any labour. Their major business is to export the vegetable nursery plant to local market.

Cabbage

Scientific name *Brassica oleracea var. capitata*

Family Brassicaceae

chromosome number $2n = 18$

Variety Bio Samart.

Preparation of nursery bed

We prepared the seed bed for sowing of cabbage. Size of bed is 1m (width). The surface of beds should be smooth and well levelled. Well-decomposed FYM is added at the time of bed preparation. Raised beds are necessary to avoid problem of water logging in heavy soils. To avoid mortality of seedlings due to damping off, treated the beds with Bavistin/mancozeb.

Sowing

Sowing should be done thinly in lines spaced at 5cm distance. Seeds are sown at a depth of 1-2 cm and covered with a fine layer of soil followed by light watering by water can.

Variety = BIO SAMART

Covering of seed bed

The beds should then be covered with green net. The watering should be done by water can as per the need. Then it covered with plastic sheet to maintain required temperature and moisture. Cover should be removed after 3-4 days or emergence of seed sprout.

Irrigation

First irrigation is given just after sowing and subsequent irrigations are given daily at evening time.

Transplant

The seedlings should be transplanted within 22 DAS. Older seedlings when transplanted result in poor growth and yield.

Land Preparation

The field is ploughed to fine tilth by giving four to five ploughing.

Manures and fertilizers

FYM and urea is incorporated into the soil before transplanting.

Method of Planting

We did transplant in the late evening. Before transplanting, the roots of the seedlings are dipped in a solution of Bavistin (2g/litre of water). Irrigation should be given immediately after transplanting. We dig the hole and placed plant inside it.

Irrigation

First irrigation is given just after transplanting of seedlings. Care should be taken to avoid water stress from the time of head formation to the head maturity period. At the time of crop maturity, irrigation should be avoided as excess irrigation at this stage causes splitting of heads. My farmer use drip irrigation system in his field.

POTATO

(*Solanum tuberosum*)

Chromosome no. 48

Family Solanaceae

Land Preparation

The land is ploughed 1-2 time with help of power tiller and well decomposed FYM is mixed with the soil.

Chemical Treatment:

Mancozeb and Carbendazim is added in water and potato tuber is dipped 10 min. in that solution. After that shade dried of potato for 20 min.

Manure and fertilizers: Well decompose FYM and NPK (12:32:16) is mixed with soil.

Sowing: Sowing should be done in furrow. The whole or cut tubers are planted 15- 20 cm apart. Row to row distance =50 cm. •Placing of tubers (eye facing upwards).After sowing the tuber it covered with soil and make ridges.

After 1 month of sowing.

Pea

Scientific name *Pisum sativum*

Chromosome number 14

Family Leguminosae

When we started our village attachment our farmer already done with sowing of pea so we started with staking of pea.

Staking of Pea For staking, we placed staking stick in equal distance around the pea field. We tie the stick with nylon thread and provide staking for plant. Staking help in proper growth of plant without damage and makes picking peas a little easier.

Weeding

First weeding is done either at 2-3 leaves stage or 3-4 weeks after sowing and second weeding is done before flowering.

Staking

2nd staking is done when plant is 2-3 feet long. Or after 15-20 days.

Harvesting

After 75 days, pea are ready to harvest. Well filled and light green pods should be harvest. Harvesting should be done 7-10 days interval.

Disease Attack:

At the time of Harvesting most prevalent disease found by me was Pea Rust.

Causal Organism: *Uromyces viciae fabae*

Plant parts affected : Pods, Leaves, stem.

Identification of disease was presence of yellow powdery mass that turned white on lateral stages. 15 – 20 °C temperature boost the disease. Rust cause dropping & withering of infected leaves.

Management:

Mancozeb application control the disease, crop rotation, destruction of plant debris.

AGRO-INDUSTRIAL ATTACHMENT (AIA)

Abhilashi University arranged 3week Agro-Industrial program during RAWE. During, this period students visited different industries, learn new things and experience Industrial environment.

Objectives:

1. To expose the students to Industrial environment, this cannot be simulated in the university.
 2. To familiarize the students with various Materials, Machines, Processes, Products and their applications along with relevant aspects of shop management.
 3. To make the students understand the psychology of the workers, and approach to problems along with the practices followed at factory
 4. To understand the scope, functions and job responsibilities in various departments of an organization.
- To expose various aspects of entrepreneurship during the programme period.

What is AIAP?

AIAP (Agricultural Industrial Attachment Programme) is a programme for imparting quality, practical and production oriented for agricultural degree.

Importance of AIAP Programme

Preparing agricultural graduates for better career in agriculture.

Preparing agricultural graduates-oriented education to face the challenges by acquiring knowledge and skill through hands on experience.

Developed entrepreneurial skills.

MUSHROOM CULTIVATION (1Dec to 10Dec)

My first industrial training was in mushroom cultivation centre. We interacted with owner. He gave us information about mushroom cultivation. He told us all the process involving in cultivation of mushroom. He cultivated button mushroom. We visited the cultivation site.

Name of Owner: Pawan Kumar

Address: Vill Darat, PO. Joginder Nagar, Teh.-Joginder Nagar, District Mandi H.P.

Their Major Business is cultivation of mushroom and they also sell the nursery plant of vegetable. He is involving in this business for last 4-5 years. He don't have any labour. He used to sell his product in the local market.

Button Mushroom *Agaricus bisporus*

In India, button mushrooms are grown seasonally and in environment controlled cropping houses. White button mushroom are grown in room with suitable temperature. It need cool climate and high relative humidity.

Room Preparation:

The size of room is 20foot length \times 12feet width. 1.5 ml of Formalin and KMNO_4 (Potassium Permanganate) is dissolve in 30 litter of water and spray inside the room for sanitation. Leave air tight room for 24 hours. Ventilation should be given after 24 hours.

Bag preparation:

They bought already prepared bag from Punjab. The prize of one bag is 85 ruppes. Formalin spray was done in bags. After 1 day, sprinkle spawn in the bag. Tie one end of bag, put small holes in the middle.

Casing

Casing is a top-dressing applied to the spawn-run compost on which the mushrooms eventually form. Casing is mixture of ash, coco peat, Poultry waste etc. Spawn run should be covered with a layer of casing about 3-4 cm. Thick to induce fruiting. After small emergence of fruiting second time casing is provide.

Moisture:

Mushroom need high humidity between 80-90 %. Provide proper water for maintain the moisture inside the bag. Don't give overwater. The humidity should be built up by frequently watering the floor and walls.

Room temperature and ventilation:

The room temperature should be maintained around 25°. The room may be kept closed as no fresh air is needed during the spawn run. After fruiting provide fresh air 2-3 times in a day. They also install Air conditioner for maintain temperature inside the room.

Harvesting

Harvesting is done at button stage and caps measuring 2.5 to 4 cm. First, crop appear after 2-3 week of harvesting. Mushrooms need to be harvested by light twisting without disturbing the casing soil. Once the harvesting is complete, the gaps in the beds should be filled with fresh sterilized casing material and then watered.

Post- harvest management

Button mushrooms are highly perishable. Harvested mushrooms are cut at the soil line and washed in a solution of 5g. Sodium Metabisulphite in 10L of water for removing the soil particles as well as to induce whiteness. After removing excess water these are packed in perforated poly bags each containing around 250-500 g. of mushrooms. They can be stored in polythene bags at 4-50 C for a short period of 3-4 days.

Disease of mushroom

The most common disease they found in their mushroom is wet bubble disease.

Wet Bubble Disease: Pathogen *Mycogone perniciosa*

High temperature and high relative humidity outside the production house is Favourable condition for pathogen.

Management: Use Carbendazim fungicides

INDUSTRIAL TRAINING

FISH FARMING (PISCICULTURE)

I started my second industrial training at fish farm. Fish farming or pisciculture involves commercial breeding of fish, usually for food, in fish tanks or artificial enclosures such as fish ponds. India ranked 2nd in Aquaculture and 3rd in Fisheries. British were the first to introduce trout in the country from Europe to meet their need for recreational fishing.

The fish farm owner was performing monoculture fish farming. Monoculture – This system allows farming a single species of fishes. It offers high production and quality.

In Himachal Barot is world famous for trout fish. Barot has one Himachal govt. run trout fish Farm and also have lots of private fishing farms. Zone II and III of Himachal Pradesh have vast potentials for the culture of highly prized fish "Rainbow Trout". The agro-climatic conditions of the area under these two zones are very congenial for cold water aquaculture. The state has over 512 trout farms, mainly in Kullu, Chamba, Shimla, Kinnaur and Mandi districts. These area are declared as Trout Zones in the State. The state has a well developed infrastructure for promotion and development of trout farming.

RAINBOW TROUT: *Oncorhynchus mykiss*

Rainbow trout is an exotic coldwater species which was introduced in many parts of India. The Himalayan foothills, Kashmir, Himachal Pradesh upper streams of Western Ghats in Karnataka, Tamilnadu and Kerala are ideal for rainbow trout culture. Presently, this fish is marketed in India in fresh chilled condition.

- **Nutritional Value** As For nutritional value Fish is full of protein, Fats, vitamin, minerals. It is the one of the best sources of Omega-3 fatty acid APA and DHA, which are important for keeping our body health.
- **Water Temperature:** Water temperature should not more than 14°C Trout fish are cold water fish.
- **Climate:** Trout fish required cold Temperature. Temperature should not more than 21°C.

- **Size of water tank:** 2m width×17m length,1.5m depth. One tank contains 3000-4000 fishes.

Breeding Climate:

November, December and January are the month for trout breeding. 2 years old fish is mature for breeding. Mature fishes are separated from small fish.

Breeding: Trout will not spawn naturally in culture systems, thus juveniles must be obtained by artificial spawning in a hatchery. For artificial spawning firstly they inspect the mature female and male and separate them in different tank.

Hand Stripping of fish Egg

Stripping is the removal of the unfertilized eggs of sexually mature fish for further farming of indigenous fish species. Immediately after stripping, the breeding fish should be released into water. Hand stripping the female by applying gentle hand pressure to the abdomen, moving toward the vent the stream of eggs is directed into a bowl. This process of egg release is termed spawning. One fish release 1000-2500 egg at one time.

Hand Stripping of male fish Milt (sperm)

Milt is sperm which we get from male fish. Process of Stripping of Milt is Same as stripping of eggs. We collect the milt and mix it with the egg with the help of feather. 2 years old male is mature for milt. For 1 female eggs, 2 male milt is enough for fertilization.

Egg, sperm and 100 ml of water used for fertilization. Eggs can be fertilized within the first 40 seconds. After fertilization, washed egg with fresh water and put eggs inside the incubation tray.

Water added in tray. Water temperature should be 10-12°C. Egg remains in water for 21- 25 days. Rainbow trout eggs will hatch approximately 3 weeks after fertilization.

Incubation Period

During this period, we have to inspect incubator tray daily to avoid any kind of contamination. If we find white egg (unfertilized) we have to remove that egg from tray. Because that egg cause fungal infection to other egg.

After hatching eye egg are formed. At this stage it is also use for transportation. After 1 week it become fry. The fry upto 1 g was retained in the hatchery and later shifted to nursery ponds and retained there till it acquired the weight of 5 g When fry reach 8-10 cm in length they are moved to outdoor grow-out facilities.. One week fry start feeding.

Grading: Grading, should be done every month. Separate fish according to their size. Each tank contains different size of fish. Grading is necessary because large fish eat small fish.

Handling and processing

Trout fish took 10-12 months to attain the marketable size of 250 g. Due to cold water fish it is slow growing in nature. Before slaughter, all fish should be starved for 3 days and, once killed humanely, the head should be left on; beheaded fish spoil more quickly. Rainbow trout are supplied to markets either fresh or frozen, and their shelf life is 10-14 days if kept on ice. Trout are marketed as gutted whole fish, fillets (often boneless), or as value-added products, such as smoked trout.

Marketing

They mainly sold fishes in Delhi hotel. Size of fish for table purpose is 250-300g. Price of 1 kg of fishes is 700 rupees. They also sell fish spawn, fish fry. Products for human consumption come as fresh, smoked, whole, filleted, canned, and frozen trout that are eaten steamed, fried, broiled, boiled, or micro-waved and baked. Trout processing wastes can be used for fish meal production or as fertiliser.

Disease

Common diseases found in the fish is fin rot.

Fin Rot: bacterial infection (*Pseudomonas fluorescens*)

This disease is mainly caused due to fluctuation in temperature. It mainly happen 2 time in year when climate change.

Treatment

They used salt bath for treatment of fin rot.
